purebeauty

organic skincare, tanning & nails salon

The CACI non-surgical facelift treatment helps to tighten and tone sagging facial muscles, while smoothing the appearance of fine lines and wrinkles. The treatment produces immediate and dramatic results. It works by combining a unique, patented; electrical waveform with the naturally occurring bioelectric current of the body to achieve instantly improved results of sagging muscles. This deeply relaxing treatment is an overall treatment for the face and neck and also offers body toning for the breasts, stomach and legs.

MICRODERMABRASION

Microdermabrasion is a non-invasive procedure that not only removes the upper layers of the skin but significantly reduces skin imperfections, e.g. discolouration, age spots, small wrinkles, congestion - your skin is left clear and smooth. Regular treatments are required to see the greatest improvements in your skin tone and texture, and to minimise lines and wrinkles.

MICRODERMABRASION AFTERCARE

- No Sun-beds for 5 days (purebeauty advises all clients NEVER to use Sun-beds).
- No Heat Treatment for 5 days.
- No Exercise for 24 hours.
- No Make-Up for 6 hours.
- After Microdermabrasion clients are advised to use a sunblock to protect skin for 5 days.

ACNE

Pain-Free non-invasive treatment for the control of acne in all age groups. This treatment is based on red and blue light therapy and works by bathing the skin with a special wavelength of pure light. The special wavelength and intensity of light has been found to create a toxic environment for the bacteria that cause acne. A secondary effect of this light is that it stimulates the body's natural repair mechanisms to further assist skin recovery.

Clients visit purebeauty for CACI Acne treatments twice a week for four weeks. You will see an improvement at two weeks and further improvement after the four-week light therapy course. However, the full impact of the treatment is progressive and regular maintenance, after the initial course, is recommended.
